DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: The combination as claimed requires a swash plate compressor comprised of a housing having cylinders formed therein; a drive shaft rotatably supported therein; a swash plate housed inside a swash plate chamber within the housing and which rotates with the drive shaft; and pistons that reciprocate inside the cylinders as the swash plate rotates, wherein a front-side and rear-side intake chamber each store fluid to be guided into the cylinders and are disposed to the front and rear of the chamber, respectively; a front-side outlet chamber and a rear-side outlet chamber which store compressed working fluid received from the pistons are disposed to the front and to the rear of said swash plate chamber along the axial direction; a first gas passage and a second gas passage extending along the axial direction, a third gas passage formed substantially symmetrical to said first gas passage relative to a plane containing said drive shaft, a fourth gas passage formed substantially symmetrical to said second gas passage relative to the plane containing said drive shaft and communicating with said second gas passage, and an external component that includes an intake port and an outlet port to be connected to piping, are all disposed at said housing; wherein said first gas passage and said third gas passage communicate with said swash plate chamber, and wherein the first and third gas passages are each operative to communicate with said intake port to supply the working fluid into said front-side intake chamber and said rear-side intake chamber; and wherein either the second or fourth gas passage is made to

communicate with said front-side outlet chamber and said rear-side outlet chamber, and wherein the second or fourth gas passage which is not in communication with said outlet chambers is made to communicate with said outlet port. No prior art documents appear to suggest or describe such a combination of structural and functional limitations, or any obvious variants thereof. In particular, no prior art compressors describe Applicant's symmetrical housing structure with symmetrical gas passages that allow the inlet/outlet ports to be moved to different locations on the compressor (See Figures 9-15). Moving the inlet/outlet on other prior art compressors would destroy that function thereof, since the gas flow path is pre-determined and cannot be altered.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ALEXANDER B. COMLEY whose telephone number is (571)270-3772. The examiner can normally be reached on M-F 7:30am - 5:00am EST (Alternate Fridays Off). If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Devon C. Kramer can be reached on (571)-272-7118. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
